Stylesheet Version v1.1.1

Description

Tubular golf tee

[0001]

[0002] The uniqueness of this invention is that this golf tee does not have a single point. The bottom is a thin cylindrical tubular section which allows it to be embedded into the earth easily. The top is a wide cylindrical tubular section which allows the golf ball to be set on. The tee can stack one inside the other due to the tubular geometry. It can be made of plastic using the injection molding process.

DESCRIPTION OF DRAWINGS

[0003] Fig.1 depicts where the golf ball sits. Fig.2 depicts how the tee stacks. Fig.3 depicts the sharp tubular edge.
